

DRUPAL HOSTING, MAINTENANCE AND SUPPORT

Secure, Fast and Reliable
Website Delivery

Deliver the quality web hosting your Drupal website needs.

Your website is essential to further your business goals and reach potential customers. While a lot of focus is placed on design and content an equally important part that is often an afterthought, is the website hosting. A reliable and robust hosting solution is critical to delivering a successful online experience not only to your visitors but also for those who manage it.

Drupal is a powerful, flexible and secure CMS that meets the needs for most websites. It is also constantly improving with new features and security updates being released regularly. Keeping your Drupal website up-to-date with the latest secure versions, while having high performance on your host can be a challenge that requires support from experienced professionals. However in doing so you are ensuring your website, services and online experience are always being delivered in the most secure, consistent and optimal way.

How we help.

We make sure you are delivering a constant high quality experience with a secure high performance platform optimized for Drupal. By using a monitored system infrastructure, backups and SSL encryption, your website and data will be better protected from online threats.

First we transfer your Drupal website onto our hosting platform and configure it to work with SSL encryption and a Global CDN. Then we perform a site audit to make sure your system is free from malicious code and that it is running safely and clean.

With your site on our service, our experts maintain your system, keeping it current with the latest updates and ensuring your website stays stable and secure. Our support team are also ready to answer your queries and to assist with your hosting and maintenance needs.

Drupal Hosting and Maintenance Plans

Hosting Plans

We provide a number of plans to suit your business requirements.

Secure

¥25,000 per month

Site owners requiring their site is managed, up to date and secure but don't feel a need for technical and CMS support.

- 25,000 Users
- 125,000 Page Views
- Email contact support for critical issues only.

Business

¥50,000 per month

Site owners with key business serving sites who may require support and assistance for running their system and website.

- 25,000 Users
- 125,000 Page Views
- Support includes email contact for server and Drupal system related issues where critical issues are responded to immediately and minor issues responded to within 2 business days.

Dedicated

¥150,000 per month

Site owners with key business serving sites who may require support and assistance for running their system and website.

- 50,000 Users
- 250,000 Page Views

Drupal Hosting and Maintenance Plans

Enterprise

For enterprise level sites and services please contact us.

One-Time Setup Fee ¥150,000 (required)

We work with you to migrate your website over to our platform. During the set up, we perform a full site audit of your website, where we inspect to make sure it does not have any malicious code. Once confirmed to be safe and clean, the site is launched.

All Plans Include

- Updates to Drupal Core and Modules.
- Monitoring of network, server, and application resources.
- Denial of Service Protection (DDOS Protection).
- Daily backups of website.
- HTTPS protocol via SSL certificate.
- Global CDN (Content Delivery Network).
- Multi-site environments for Dev, Test and Live sites.
- Git version control for website.

Success Story

GLP Hosting, Maintenance and Support

Global Logistics Properties

GLP is a leading global provider of modern logistics solutions. When they approached us about hosting their Drupal website, they were using a custom hosting solution. While the hosting was able to run their Drupal website it was not optimized and lacked the support required to handle their needs including security concerns.

They had a number of requirements to keep their brand safe and to allow it to expand. Our Hosting, Maintenance and Support solution was able to meet all of their needs.

After migrating their website, we performed a Site Audit to make sure the website was safe and clean from malicious scripts. Once done, optimization and configuration changes were implemented allowing for the best performance.

The website now runs optimized for Drupal on a maintained server over a secure and robust infrastructure. The website is fast and safe with Global CDN, SSL and a monitored network to protect against attacks. Through regular updates, as well as security updates performed on the day of release, everything is kept up-to-date and secure.

With our team of experts ready to provide support GLP and their website managers, GLP are reassured their website is secure, safe and delivered to their visitors in the best possible way.
